

DEVELOPED BY INDUSTRY LEADING SCIENTISTS,
THE NEW STANDARD IN PLANT CARE

Complete Basic Care

FULL FERTILISER KIT

With this Full kit of Gen200 Complete Basic Care, you have all the necessary nutrients in one ready-to-use package for a successful cycle for your plants. Everything from planting to harvest in one box good for 2500 or 7500 liters of water.

GEN200 Pink is a highly concentrated dry nutrient solution that adds nitrogen and calcium to the diet of your plants. It increases chlorophyll levels and strengthens the overall structure of the plant. Furthermore, the ability to efficiently transport nutrients through the plant is enhanced.

GEN200 Blue is a complete mix of all nutrients that a plant needs in order to grow and prosper. By combining GEN200 Pink and GEN200 Blue, you will offer your plant the entire spectrum of minerals.

GEN200 Orange is used to boost the plant in the flowering cycle. The high amounts of phosphorus, potassium and trace elements in this mix are essential to ensure exuberant growth and bloom.

GEN200 Green brings all the essential, often forgotten, minerals to the table. It is a complete mix of all the trace elements that a plant needs throughout its life.

Can be used on all substrates

To be used with all watering systems

DEVELOPED BY INDUSTRY LEADING SCIENTISTS,
THE NEW STANDARD IN PLANT CARE

Complete Basic Care

FULL FERTILISER KIT

How to use

1. Heat the water in your reservoir to a temperature between 18-22 degrees.
2. Add the advised dosage of GEN200 Pink to you feeding water.
3. Stir well for 1-2 min until all fertilisers are completely dissolved.
4. Add the advised dosage of the other GEN200 Complete Basic Care products to your feeding water.
5. Stir well for 1-2 min until the fertiliser is well dissolved.
6. You can now start feeding your plants.

Easy transport & longer shelf life

Can be used on all substrates

To be used with all watering systems
